Top Skills

Flutter

Cross-platform Development

Software as a Service (SaaS)

Mian Muhammad Athar

Solo Product Engineer | Flutter · SwiftUI · Next.js · Supabase |
Published iOS Apps & SaaS | AI-Augmented Development | Open to
Freelance

Sahiwal Division, Punjab, Pakistan

Summary

I ship products end-to-end — from spec to App Store.

I'm a solo product engineer with a background in Electronic
Engineering

(GIKI, 5 distinctions) who builds mobile apps, games, and SaaS
systems

independently. Two iOS apps are live on the App Store. A multi-
location

SaaS POS platform runs in production. I own the full stack:
architecture,

build, deployment, and post-launch.

My current stack: Flutter and Dart for cross-platform mobile, SwiftUI
and

SpriteKit for native iOS, Next.js and Supabase for web and SaaS. I
integrate OpenAI and Claude APIs for AI-native features — GPT-4
Vision

powers real-time breed identification in FurrFind AI, my published
pet

identifier app.

I use frontier AI coding tools (Claude Code, Gemini CLI) as scoped
implementation agents in a disciplined workflow: every project runs
on

PRD → TRD → Architecture Document → Phase Plans → pre-
deployment safety

checklist before anything ships. This compresses delivery timelines
without

trading away quality.

Before software, I ran three e-commerce companies across US and
UK markets

(Shopify + Amazon, \$130K revenue) — which is why I build products with operator instincts, not just engineering ones.

Open to freelance contracts for mobile apps, SaaS builds, and AI-integrated product work. Portfolio:
portfolio-alpha-five-1ka0417h0y.vercel.app

Experience

Self-employed

Solo Product Engineer

January 2025 - Present (1 year 6 months)

- Designed, built, and shipped FurrFind AI — a Flutter iOS app using GPT-4 Vision for real-time dog and cat breed identification. Published on the App Store with RevenueCat subscription tiers, AdMob monetization, daily scan limits, local scan history, and a premium AI care chat feature.
- Engineered Block Crush Puzzle — a SwiftUI/SpriteKit iOS game with 120Hz gameplay, tactical power-up systems (Hammer, Sweep, Bomb, Nuke), Game Center leaderboards, and StoreKit IAP. Published on the App Store (id6755646573).
- Architected AuraPOS — a multi-location point-of-sale SaaS platform using Next.js 14, Supabase, TypeScript, and Tailwind CSS. Supports real-time inventory, reporting, offline-first PWA architecture, and multi-tenant operations.
- Established a full engineering governance system on every product: PRD, TRD, Architecture Document, phase-gated delivery plans, and a pre-deployment safety checklist sign-off before any production release.
- Operated an agentic development workflow with Claude Code and Gemini CLI as scoped implementation agents — compressing multi-month delivery timelines to weeks while maintaining zero-compromise quality standards.

eAdvizers

Co-Owner

February 2022 - Present (4 years 5 months)

United States

- Operated 3 e-commerce brands across US (Texas) and UK (Yorkshire) markets

via Shopify and Amazon, generating \$130K+ in cumulative revenue.

- Managed full ownership of inventory, supplier relationships, margin analysis, and customer operations across two geographies simultaneously with no external team.

- Built internal business intelligence tooling (Soleris Ledger) to track P&L, ROAS, inventory turnover, and multi-currency financials — eliminating manual spreadsheet reporting entirely.

u-blox

Intern

December 2018 - March 2019 (4 months)

Lahore, Pakistan

- Programmed Raspberry Pi to establish PPP connection, WiFi access point, FTP, and NDIS interfaces with an LTE module using Python and Shell scripting for IoT connectivity prototypes.

- Established serial communication between LTE modules and FRDM-K64F microcontroller; integrated ESP8266 IoT module for wireless data storage and automated email response pipelines.

- Configured Arduino Yun for PPP-to-WiFi bridging with LTE module, enabling remote connectivity for field-deployed sensor nodes.

Fauji Fresh n Freeze Limited

Intern

July 2017 - September 2017 (3 months)

Sahiwal

- *Acquired fundamental engineering knowledge and technical expertise includes Electronic engineering; communications systems, testing; installation, fault finding and diagnosis.

- *Delegated work responsibilities in the production department, prototype project to steer optical sorting.

Century Paper and Board Mills Ltd.

Intern

June 2016 - July 2016 (2 months)

*Controlled all operation and maintenance endeavors to install electronic equipment of the machines along with producing daily reports of time-based maintenance.

*Designed and devised instrumentation loops at production plant as well as updated and maintained electrical workshops.

Education

Ghulam Ishaq Khan Institute of Engineering Sciences and Technology

Bachelors, Electronic Engineering
